INTRODUCTION

The Pasadena Unified School District has contracted with Davis Demographics & Planning, Inc. (DDP) to update and analyze demographic data relevant to the District's facility planning efforts. The scope of contracted work includes: mapping the District, address matching the current student file, developing and researching pertinent demographic data, identifying future residential development plans and developing a seven year student population projection. DDP will then assist the District in developing solutions for housing future student population. Additionally, this study was prepared to assist the District's efforts in evaluating future site requirements and attendance area changes.

The purpose of this report is to identify and inform the District of the trends occurring in the community; how these trends may affect future student population; and to assist in illustrating facility adjustments that may be necessary to accommodate the potential student population shifts. The District can then use this information to better plan for the need, location and timing of facility or boundary adjustments.

The **Sources of Data** section details where the two sources of data, geographic and non-geographic, are collected and how each data item is used in the seven-year student population projection model.

The **Seven Year Projection Methodology** section discusses in detail how the factors used in the study were calculated and why they were used. These factors include: the calculation of incoming kindergarten classes, additional students from new housing (referred to as student yield), the effects of student mobility, and a detailed review of planned residential development within the District.

The **Student Resident Projection Summary** sections are a review of Fall 2007's student resident projection results. Included in these sections are a district wide student population projection summary and a projected resident student population summary for each existing attendance area and study area.

While reading this report, it is important to remember that this is a snapshot of current and potential student population based upon data gathered in Fall 2007. Population demographics change, development plans change, funding opportunities can change, District priorities can change, and therefore, new projections and adjustments to the overall Facilities Master Plan will continue to be necessary in the future.

EXECUTIVE SUMMARY

Davis Demographics & Planning, Inc. is assisting the Pasadena Unified School District to plan for future student population changes. By factoring current and historical student data with demographic data and planned residential development, DDP calculated a seven year student population projection. This projection is based upon residence of the students and is designed to alert the District as to when and where student population shifts will occur.

The Pasadena Unified School District is expected to experience a decline in enrollment over the next seven years, with the decline seen throughout the grade levels. The K-12 district student population is projected to decrease by approximately 2,034 over the projection time frame. The overall elementary (grades K-6) student population is expected to decrease by 750 students, with some isolated pockets of growth. The middle school (grades 7-8) student population is expected to decrease by 399 students by the Fall of 2014. The High school student population (grades 9-12) is also expected to decline, with the projected 9-12 student population falling 886 students over the projection period.

DDP also conducted a Potential Student analysis. This was accomplished by comparing estimated school age children to the actual number of P.U.S.D. students residing in each attendance area. District wide ESRI estimates there are approximately 35,000 school age children (age 5-17) residing within the Pasadena U.S.D. boundaries. The P.U.S.D. enrollment at CBEDS for the 2007/2008 school year was approximately 20,050 students, including about 500 inter-district transfer students. DDP estimates approximately 15,000 school age students residing in the P.U.S.D. boundaries but not attending the P.U.S.D. This translates to approximately a 57% capture rate.

It is important to remember that DDP calculates the seven year student population projection with the most current information available at the time. The further out the projection period the less accurate the projection may be. We anticipate changes to the demographics trends in the future and, therefore, stress the importance of annual updates to track the trends as they occur.

DDP Observations

- Resident student population in the Pasadena U.S.D. has declined annually since the 2000/2001 school year.
- Births within the P.U.S.D. have remained somewhat stable from 2002 to 2006
- Move In/Move Out (mobility) calculations indicate a loss in student population for most attendance areas.
- P.U.S.D. student population is projected to continue declining within the timeframe of this projection.
- P.U.S.D. is capturing approximately 57% of the school age population residing within its boundaries. The lowest capture rate calculated by DDP.
- Intra-district transferring is wide spread throughout the P.U.S.D. with many schools capturing less than 50% of the P.U.S.D. students residing in its attendance area.

SOURCES OF DATA

Geographic Map Data

Four geographic data layers were updated for use in the seven-year student population projections:

1. Street Centerline Database
2. Study Areas
3. Schools
4. Students – Historical and Current

1) Street Centerline Data

DDP has licensed a digital street centerline map of the School District from ETAK. The street database has associated attributes that contains, but are not limited to, the following fields: full street name, address range and street classification

The main function of the streets is in the geo-coding process of the student data. Each student is address matched to the streets by their given address. The geo-coding process places a point on the map for every student in the exact location that student resides. This enables DDP to analyze the student data in a geographic manner.

Another vital utilization of the digital street database is in the construction of study areas. Freeways, major streets and neighborhood streets are used as boundaries for the study areas.

2) Study Areas

Study areas are small geographic areas and the building blocks of a school district; they are similar to neighborhoods. Study areas are geographically defined following logical boundaries of the neighborhood, such as: freeways, streets, railroad tracts, rivers, etc.... Each study area is then coded with the elementary, middle and high school that the area is assigned to attend. By gathering information about the district at the study area level, you can closely monitor growth and demographic trends in particular regions and spot potential need for boundary changes or new facilities.

3) Schools

The District provided school facility location information to DDP for the purpose of mapping the District facilities.

4) Student Data

a. Historical Student Data - Historical enrollment is used to compare past student population growth and trends as well as the effects of mobility (move in, move out from existing housing) throughout the District. DDP utilized the 4 previous year's (2004, 2005, 2006 and 2007) students. The students have been matched to their individual location using the address information provided at time of enrollment.

b. Current Student Data - A student data file for October 15, 2007 (received by computer data file from the School District) summarized by grade level and by Study Area is used as a base for enrollment projections. Existing students were categorized by Study area through the address matching process that locates each student within a particular area based upon their given address. The projections run each of the next seven years from fall 2008 through fall 2014.

The Student Accounting Summary (Table 1) indicates the total student enrollment as of October 15, 2007 and the number of student used in the seven year student population projections. The projection model is based upon student residence and excludes students residing outside of the District's boundaries, students unable to be address matched and special education students (special education students usually attend a school that services their particular need).

Student Accounting Summary
Fall 2007/2008 Actual Enrollment (10/15/2007)

Total Students Provided by District File	20,054
Students Living out of District	-525 (added in)
Special Education Students	-549 (added in)
Student Unmatched due to Incorrect Address Information	-13 (added in)
Center for Independent Study Students	-301 (excluded)
Duplicate Student Records	-5 (excluded)
RESIDENT STUDENTS USED AS PROJECTION BASE	18,661

Table 1 – Student Accounting Summary

Non-Geographic Data

Two basic sets of non-geographic data were compiled and reviewed for use in the seven-year student population projections by residence:

1. Births by Zip Code
2. Mobility Factors

1) Births by Zip Code Data - Birth data by postal zip code was obtained from the California State Department of Health for the years 1991-2006 and roughly correlated to the Pasadena Unified School District. Past changes in historical birthrates are used to estimate incoming kindergarten student population from existing housing.

2) Mobility Factors - Mobility refers to the increase/decrease in the migration of students within the District boundary (move-in/move-out of students from existing housing). Mobility, similar to a cohort, is applied as a percentage of increase/decrease among each grade for every year of the projections

SEVEN YEAR PROJECTION METHODOLOGY

The projection methodology used in this study combines historical student population figures, past and present demographic characteristics, and planned residential development to forecast future student population at the study area level. District-wide projections are summarized from the individual study area projections. **These projections are based on where the students reside and the attendance are they reside in. We use the actual location of where the students reside, as opposed to their school of enrollment, in order to provide the most accurate estimate of where future school facilities should be located.** The best way to plan for future student population shifts is to know where the next group of students will be residing. The following details the methodology used in preparing the student population projections by residence.

Seven-Year Projections

Projections are calculated out seven years from the date of projection for several reasons. The planning horizon for any type of facility is typically no less than five years, often longer. Seven years are sufficient to adequately plan for a new facility. It is a short to mid term solution for planning needs. Projections beyond seven years are based on speculation due to the lack of reliable information on birthrates, new home construction, economic conditions etc.

Why Projections are Calculated by Residence

Typically, school district projections are based on enrollment by school. However, this method is inadequate when used to locate future school facility needs, because the location of the students is not taken into consideration. A school's enrollment can fluctuate due to variables in the curriculum, program changes, school administration and open enrollment policies. These variables can skew the apparent need for new or additional facilities in an area.

The method used by DDP is unique because it modifies a standard cohort projection with demographic factors and actual student location. **DDP bases its projections on the belief that school facility planning is more accurate when facilities are located where the greatest number of students reside.** This is especially true for the P.U.S.D. where less than 50% of the student population attend the school of their attendance area.

The best way to plan for future schools is to know where the next group of students will be coming from. The following details the methodology used in preparing the student population projections.

FACTORS

1) Progression - Each year of the projections, 12th grade student's graduate and continuing students progress through to the next grade level. This normal progression of students is modified by the following factors:

2) Incoming Kindergarten – Live birth data is reported to the California State Department of Health by the resident postal zip code of the mother. DDP uses birth data by zip code so, if need be, a different birth factor can be applied to various areas of the District.

Incoming kindergarten classes, for existing homes, are estimated by comparing changes in past births and birthrates. Table 2, shows the total births for each zip code in the Pasadena Unified School District from 1996 to 2006 (see Table 2). Incoming kindergarten classes are determined by multiplying the existing kindergarten class (2007) by the percent increase/decrease in the birthrate for the year the kindergarten class was born (2002).

Assuming that the Fall 2007 kindergarten class was born in 2002, DDP compared the total births in 2002 to the total births in 2003, to determine a factor for next year's kindergarten class (Fall 2008). Similarly, 2002 was compared to 2004 (Fall 2009 K class), 2002 to 2005 (Fall 2010 K class) and 2002 to 2006 (Fall 2011 K class).

	Zip Code								Change
	91001	91024	91101	91103	91104	91106	91107	Total	
1996	509	119	285	603	738	373	436	3063	114.9%
1997	475	123	275	512	699	379	452	2915	109.3%
1998	510	110	267	523	665	334	444	2853	107.0%
1999	495	112	252	545	647	372	470	2893	108.5%
2000	485	105	268	501	633	368	428	2788	104.6%
2001	513	110	107	530	631	338	464	2693	101.0%
2002	489	114	266	444	582	339	432	2666	BASE
2003	484	111	286	471	595	317	436	2700	101.3%
2004	494	120	293	515	581	364	413	2780	104.3%
2005	452	98	299	476	596	337	416	2674	100.3%
2006	490	101	290	473	610	338	385	2687	100.8%
									Used in Projection
									Year of Projection
									102.0% 2008
									105.0% 2009
									102.0% 2010
									102.0% 2011
									101.0% 2012
									101.0% 2013
									101.0% 2014

Table 2– Birth Data

In Table 2, above, the birth data by zip code shows a fairly consistent downward trend from 1996-2001 with stabilization from 2002-2006. DDP believes that this trend will continue for the first 4 years of the student population projection (2008-2011). DPP used 101% for the last 3 years of the projection (2012-2014) because while the birth trend is declining, it is important not to under project the number of new kindergarteners in the final years of the projection. Also, there have been some small indications that births in Los Angeles County may start to increase slightly in a few years.

3) Student Mobility Factors - Student mobility factors further refine the seven-year student population projections. Mobility refers to the increase/decrease in the migration of students within the District boundary (move-in/move-out of students from existing housing). Mobility, similar to a cohort, is applied as a percentage of increase/decrease to each grade for every year of the projections.

A net increase or decrease of zero students over time is represented by a factor of 100%. A net student loss is represented by a factor less than 100% and a net gain by a factor greater than 100% (see example).

Example:

$$\begin{array}{r} 100 \quad \text{K-6 students in Fall 2007} \\ \times \quad 99.7\% \quad (\text{K-6 mobility}) \\ \hline = \quad 99.7 \quad \text{K-6 students in Fall 2008} \end{array}$$

Having historical student data categorized by Study area is extremely helpful in calculating accurate Student Mobility Factors. DDP was able to utilize the last five year's (Fall 2004, 2005, 2006 and 2007) student data. The 2004 student data was compared to 2005 and 2005 to 2006 and 2006 to this year's student data at the Study area level. Grades K-6 Mobility (primary mobility) and grades 7-8, 9, 10, 11 and 12 Mobility (secondary mobility) were calculated to correspond with predefined regions.

The sampling used was taken over a five-year period (student data from 2004 through 2007) and four yearly groupings were calculated. For example, a comparison was made for the Fall 2004 K-5 student population to the Fall 2005 1-6 grade students. This comparison was also conducted for the Fall 2005 & Fall 2006 and the Fall 2006 & Fall 2007 groupings.

Mobility Used in Projection - Calculated from Historic Enrollment									
	Region 1	Region 2	Region 3	Region 4	Region 5	Region 6	Region 7	Region 8	Region 9
Grades K-6	98.5%	95.1%	95.4%	97.2%	99.1%	100.7%	95.0%	96.9%	96.6%
Grades 7-8	93.0%	94.5%	94.6%	93.0%	96.0%	94.9%	94.6%	96.9%	94.2%
Grade 9	100.0%	100.0%	112.2%	114.8%	124.3%	100.0%	100.5%	105.4%	101.2%
Grade 10	91.5%	87.9%	86.5%	93.5%	95.5%	93.9%	85.0%	95.2%	88.2%
Grade 11	88.1%	88.2%	86.1%	92.0%	91.0%	91.2%	80.9%	90.6%	94.0%
Grade 12	100.0%	94.2%	90.9%	96.9%	100.7%	99.2%	93.0%	94.9%	93.6%

Table 3– Mobility Factors

APPLYING VARIABLES TO GENERATE THE PROJECTIONS

The following paragraphs summarize how DDP uses the factors to determine the student population projections. Remember that these projections are based on residence.

Pasadena Unified School District has been broken into 464 study areas and each is coded for each elementary, middle and high school depending upon what attendance area it falls within. The residential projections are calculated at the study area level. This means that DDP conducts 464 individual projections that are based upon the number of students residing in each study area

The first step in running these projections involves listing the number of students that live in a particular study area by each individual grade (Kindergarten through 12th grade). The current student base (Fall 2007) is then passed onto the next year's grade (2007's K become 2008's 1st graders, 2007's 1st graders become 2008's 2nd graders, and so on). After the natural progression of students through the grades is applied, then Birth Factors are multiplied to the current Kindergarten class to generate a base for the following year's Kindergarten class.

Next, a Mobility Factor is applied to all grades. Again, these factors take into account the natural in/out migration of students throughout the District. The K-6 mobility factor simply means that grades K through 6 will have the same factor applied to each of those grades. The same concept is applied to the 7-8 groupings; the resulting calculation is evenly divided between grades 7 and 8. The 9-12 mobility is applied to each grade level.

To finish generating the projections by residence, the same process is conducted for each of the 464 study areas. Once the projections have been run at the study area level, then it is simple addition to determine projections for each of the District's attendance areas or for a district-wide summary. For example, the residential projections for Pasadena High School are simply the summary of all of the study areas that make up this specific attendance area (see Sections Three, Four, and Five for the projections of each elementary, middle and high school attendance area). The District Summary for the projections (Section Two) is a total summary of all 464 study areas, which excludes all of the students that attend a District school and live completely outside of the District's boundaries and students unable to be address matched. These out-of-district and unmatched students are factored back into the projections by simply adding the existing totals in at the bottom of the projections (please see the Attendance Matrices in Appendix A for a breakdown of the out-of-district and unmatched students by school). DDP adds the current total out-of-district and unmatched students to each year of the projections because there is no way to accurately forecast these students in the future.

SEVEN YEAR PROJECTION SUMMARIES

Finally, the student population is projected out seven years for each of the study areas and for the entire Pasadena Unified School District. The District Wide Summary enables the District to see a broad overview of future growth and what impact this growth will have on existing facilities. The study area listings enable the District to monitor student population growth or decline in smaller geographic areas within the District.

At any point in time, Study areas and their projected resident students can be shifted between schools to assist in balancing enrollment growth. Together, these projection summaries present the means for identifying the timing of additional student arrivals and overall facility requirements, as well as location in order to accommodate the District's expected population shifts.

District Projection Summary

Projection Date 10/15/2007

District Wide Student Population Projection Trends

The Pasadena Unified School District is expected to experience a decline in enrollment over the next seven years, with decline seen throughout the grade levels. The K-12 district student population is projected to decrease by approximately 2,034 over the projection time frame. The overall elementary (grades K-6) student population is expected to decrease by 750 students, with some isolated pockets of growth. The middle school (grades 7-8) student population is expected to decrease by 399 students by the Fall of 2014. The High school student population (grades 9-12) is also expected to decline, with the projected 9-12 student population falling 886 students over the projection period.

It is important to remember that DDP calculates the seven year student population projection with the most current information available at the time. The further out the projection period the less accurate the projection may be. We anticipate changes to the demographics trends in the future and, therefore, stress the importance of annual updates to track the trends as they occur.

Please note:

CBEDS data for 2000/01 – 2007/08 are from the California Department of Education DataQuest website

Elementary Attendance Area Student Population Projection Trends

The Elementary School (grades K-6) student population is expected to decrease 750 students at the end of the projection period in Fall 2014, which is the largest decrease of the three grade ranges studied (elementary, middle, and high). This is largely caused by an overall decrease in births throughout the district. However, a few elementary attendance areas are expected to grow in this time frame despite the general trend of declining student population.

Middle School Attendance Area Student Population Projection Trends

The Middle School (grades 7-8) student population is expected to decrease by 399 students at the end of the projection period in Fall 2014. Over the next several years, the general trend of declining Middle School population is expected to continue based smaller Elementary classes matriculating up to the Middle Schools.

High School Attendance Area Student Population Projection Trends

The high school (grades 9-12) student population will experience a small decline in the number of resident students at the end of the projection period in Fall 2014. The district may experience up to an 886 student decrease at the high school level. Many districts in the area also will experience a decrease in the high school student population. Much of this can be attributed to a steady decline in birth rates over the last several years, as well as a general lack of new affordable residential construction in the area..

ATTENDANCE MATRICES

Three Attendance Matrices have been included to provide a better understanding of where students reside and where they attend school. **Remember, our projections are based upon where the students reside, not where they attend school. We use the actual location of where the students reside, as opposed to their school of enrollment, in order to provide the most accurate depiction of where future facilities (if necessary) should be located.** Therefore, since the projections are based upon where the students reside, the figures we use as a base for each school's resident projection may be slightly higher or lower than the actual reported enrollment for each school.

These attendance matrices act as checks and balances for student accounting. They show where the students reside (in what School of Residence) based upon our address matching capabilities and what school they attend (School of Attendance) based upon data in the student file supplied by the District. The inclusion of these matrices is essential to showing how the students used in the projections match up to the District's records of enrollment for each school. The best way to plan for future facilities is to know where the next group of students will be coming from, not necessarily which school they are currently attending.

READING THE MATRIX

Looking at the K-6 Elementary School Attendance Matrix, let's begin with Altadena as an example. Following down the first column with the Altadena heading, there are 165 K-6 grade students who attend Altadena *and* reside in the Altadena attendance area. Continuing downward, 12 students attend Altadena who reside in the Burbank attendance area. Next it shows 10 students attending Altadena who reside in the Cleveland attendance area, and so on.

The item "Out of District" refers to students who live completely outside of the Pasadena Unified School District, but attend one of the District's schools. There is 1 Out of District students attending Altadena. The item, Unmatched, refers to students who were unmatched due to incomplete address data (including P.O. Boxes). There are 7 unmatched students who attend Altadena. The "Total Attendance" row shows the total number of students attending a school regardless of where they reside, and should reflect the District's enrollment counts for each school. There are a total of 328 students attending Altadena.

The next step is to read across the matrix, beginning with the Altadena attendance area row. We now understand that the 165 represents the total number of K-6 grade students who reside in the Altadena attendance area and attend Altadena. The next column, Burbank, refers to the number of K-6 grade students who reside in the Altadena attendance area, but attend Burbank. There are currently 10 students who reside in the Altadena attendance area and attend Burbank.

The "Students" column is the total number of students living in that particular attendance area. There are 439 K-6 students residing in the Altadena attendance area. The "Total Residence" is the actual number of students used in the Fall 2007 projections and can be derived by adding the Students column downward.

POTENTIAL STUDENT ANALYSIS

Methodology:

The Pasadena Unified School District asked DDP to perform a Potential Students Analysis. Using data from ESRI, DDP was able to estimate the number of school age children residing in each attendance area. From the geocoded student data DDP calculated the number of P.U.S.D. students residing in each attendance area. DDP was then able to compare the estimated number of school age children in each attendance area to the number of P.U.S.D. students residing in each attendance area. DDP can assume that the difference between the two counts is approximately the number of students in each area not enrolled in a P.U.S.D. school. The non-P.U.S.D. children most likely are enrolled in a different district, private school, charter school, home schooled, etc. The district may consider these children potential students for the P.U.S.D.

For this study children age 5-10 are considered grade K-5 school age children. Children age 11-13 are grade 6-8 school age children and children aged 14-17 are 9-12 school age children.

Briefly, ESRI (the world leader in GIS software and a contributor to GIS data) derives their estimates from 2000 census actual counts that have been processed through various data models to give an estimated 2008 population (please visit the ESRI Business Analyst Online site for more information on ESRI methodology).

Findings:

ESRI estimates there are approximately 35,000 school age children (age 5-17) residing within the Pasadena U.S.D. boundaries. The P.U.S.D. enrollment at CBEDS for the 2007/2008 school year was approximately 20,050 students, including about 500 inter-district transfer students. DDP estimates approximately 15,000 school age students residing in the P.U.S.D. boundaries but not attending the P.U.S.D. This translates to approximately a 57% capture rate.

There is a large variance in the capture rate for the elementary school attendance areas. The low is in the San Rafael attendance area with a 10.2% capture rate and the high is in the Mckinley attendance area at 88.4%. The overall district wide grade K-5 (age 5-10) capture rate is 58.3%.

With the exception of the Blair attendance area (15.6%) the middle school capture rate is above the 40% mark. Wilson's capture rate of 42.8% is lowest while Washington is the high at 79.9%. The overall district wide grade 6-8 (age 11-13) capture rate is 53.3%.

Blair High School captures 36.3% of high school age children (age 14-16). Muir H.S. captures 67.4% and Pasadena H.S. captures 46.6%. The overall district wide grade 9-12 (age 14-17) capture rate is 54.6%.
